

CUSTOM SPEED CHECK SIGN NSW, 2017 CASE STUDY

This unique solution was in response to a common roadworks problem: how to integrate traffic control into an already crowded worksite. Its innovative design features a speed check sign fitted into the roadworks machinery itself.

Fulton Hogan report that the most valuable advantage of the system is that that site workers can monitor driver speeds in real time, and adjust their setup immediately - according to driver behaviour. They also report excellent results (driver compliance) using the device.

This project is a good example of our passion for innovation, from design, through manufacturing and deployment.

When a customer entrusts J1-LED with realising their vision, we pride ourselves on our innovative and agile approach to making it come to life.

J1 helps you on **your way**.
